let us spray protect your windows & other vulnerable substrates!

Fast coverage, long term protection

Internal & external plastic film protection for non-porous surfaces

Up to **12 Months Protection** for: **DOORS** | **WINDOWS** | **CONSERVATORIES**

Our fully trained experienced team can provide long term protection to windows & other vulnerable substrates in an extremely time efficient way, potentially saving £thousands for our clients in man hours & reduced material damage.

An average sized window is protected in under one minute and provides long term UV resistance!

Substrates we can protect: glass, UPVC, powder coated sills, coated aluminium, painted acrylic surfaces, sanitary ware, floor and wall tiling, ceramic finishes, worktops, doors, skirting boards and many other non porous surfaces internal and external.

Rest assured of a fast reliable service from quotation to application from The Glass Man!

Light weight & compact spray machines with lengthy hoses, enable us to access the highest of buildings to spray protect.

Application is accurate with rapid coverage and no mess.

For certain areas Protectapeel can be applied by roller.

When protection is no longer required, the protective air tight plastic film just peels away.

Windows are generally left clean with dust & dirt peeling away with the film, so reducing the need/cost for final clean up!

Ask about our film application service.
